

General Guidelines for CS363 Fall-25/Entrepreneurship

Why is this project important?

- For one, 15 marks are simply too much to ignore.
- Secondly, it is practical application of learned concept on one organization and sharing learned experience with others.
- Then, use project to build networks – they are truly valuable – you should be interning with this organization in days to come. Great opportunities for those who take it seriously!
- Your efforts to make this event successful and fruitful will be highly awarded as a certificate of appreciation and achievement.
- Finally, it's more than 20 marks – project will be covered in Final Exam as well – ref to class discussions on course outline.

General Guidelines

- Submission Deadline is **20-01-2026 via Turnitin & QOBE**. Late submission not allowed.
- The project report should be either **5000-7000** words or 25-30 pages and free of plagiarism/AI Content.
- Along with submission of the project report, a **final presentation** will also be conducted along with viva/voce and question/answer session in the classroom. The presentations will be conducted in the week of **21-01-2025 to 25-01-2025**
- You must complete your presentation in **15 mins**. 5-10 mins will be allocated for viva.
- A **hard copy of presentation only** is also required for administrative purposes (**four slides per page, Colored**)
- The report, presentation and viva carry equal marks (**33.3% for report and 66.6% for presentation/viva**).
- The report will be graded (**where applicable**) as a group whereas presentation and viva will be graded individually.
- A soft copy of your reports (**word format**) and PowerPoint slides (ppt) in a zip folder from any member of the group should be uploaded via google link provided by CR before **11:59 PM 20 January 2026**.
- Email subject and File name should be **CS_F25_REG No1_REG No2 (in chronological order please)**

Formatting of report

- All report in Times New Roman | Justified.
- Table of Content
- Executive summary/Abstract
- Title Page:

- Font: 12 | Bold | Justified
- Title of report (a reasonably size logo can be placed below title, if needed)
- Submittal date
- Submitted by: Group name/individual name / section / batch / Fall 2025.
- Submitted to: Dr. Muhammad Faisal Rasheed
- Main content:
 - Headings Font: 12 | Justified | 1.5-line spacing | spacing before: 6 pt
 - Body Font: 11 | Justified | 1.5-line spacing | spacing before: 0 pt
 - Header: Title italicized | font: 10 rights aligned | Line below header
 - Footer: Page X of Y | Font: 10 | canter | Line above footer
- Referencing
 - ***Give proper Referencing as per APA 7th for all collected information.***
- Content Quality
 - This being a group project should reflect group work and content quality should be superior.
 - No grammatical or syntax errors should be there. Proofread before submitting.
- Plagiarism
 - **No compromise on Plagiarism and any LLM or AI content; Equates to cheating in Exam. Strict adherence**

Project Details

You must clearly describe your Final Year Project technology and explain the real-world problem it solves. You should justify why this problem matters and identifies the users or customers who experience it. You must state whether your solution is a product, service, or digital platform and explain the motivation behind developing it.

Project Tasks:

Problem Statement

You must begin by clearly defining the real-world problem your Final Year Project addresses. The problem should be specific, relevant, and supported by logical reasoning or observable evidence. You should explain who faces this problem, why it matters, how it is currently being addressed, and what limitations or gaps exist in existing solutions. This section should demonstrate that your project is driven by a genuine problem rather than by technology alone.

Executive Summary

You must prepare a concise executive summary that presents your entire business idea clearly and convincingly. This section should briefly explain the problem, your proposed solution, the target market, and the overall opportunity. You should summarize how your business will generate revenue and provide a high-level overview of expected financial and growth outcomes. This section should be strong enough to motivate further evaluation of your project.

Company Description

You must describe your proposed company in clear and simple language. This includes explaining the mission and long-term vision of the business, the product or service you are offering, and the current

development status of your Final Year Project. You should also state the assumed legal structure and ownership of the business and explain how your technical solution is translated into a commercial offering.

Industry Analysis

You must conduct a comprehensive industry analysis to demonstrate an in depth understanding of the environment in which your business will operate. This section should begin by describing the industry size, growth rate, structure, and key trends. You should identify major industry players and key success factors that determine competitiveness in the industry.

Within the same section, you must analyse the broader external environment using the PESTLE framework by explaining how political, economic, social, technological, legal, and environmental factors may influence your business. You must also evaluate the competitive landscape using Porter's Five Forces Model by analysing the threat of new entrants, bargaining power of customers, bargaining power of suppliers, threat of substitute solutions, and intensity of competitive rivalry.

In addition, you must include a SWOT analysis that evaluates your internal strengths and weaknesses, as well as external opportunities and threats arising from the industry and market conditions. These analyses should be integrated logically and should support your strategic choices rather than exist as isolated descriptions.

Market Analysis

You must clearly define your target market within the industry. This section should explain customer needs, pain points, preferences, and buying behaviour. You should identify direct and indirect competitors and explain how customers currently solve the problem. Your analysis should demonstrate a strong understanding of who your customers are and why they would adopt your solution.

Value Proposition and Marketing Strategy

You must clearly articulate the value proposition of your solution by explaining the unique benefits it provides and how it solves the identified problem better than existing alternatives. In the same section, you must describe your marketing strategy by explaining how you will position your product in the market, how you will price it, how you will promote it, and how customers will access or purchase it. You should clearly link customer value with your marketing and positioning decisions.

Business Model and Revenue Model

You must explain how your business will operate economically by describing both the business model and the revenue model. This includes explaining how value is created, delivered, and captured, identifying revenue streams, outlining major cost components, and justifying your pricing logic. You should also explain how the model can scale and remain sustainable over time.

Operations Plan

As this is a technology-based project, you must provide a detailed operations plan. This section should explain how your product or service will be developed, deployed, maintained, and supported. You should describe the technical architecture, software stack, platforms, hosting or cloud infrastructure, security considerations, and data management processes. You must explain front stage operations such as user interaction and customer support, as well as backstage operations including development workflows, testing, updates, monitoring, and system maintenance. Operational feasibility is a critical evaluation criterion for this project.

Product or Service Design and Development

You must describe the current development stage of your Final Year Project and clearly outline remaining development tasks. This section should explain technical challenges, development risks, testing strategies, and validation methods. If applicable, you should discuss intellectual property considerations and explain how your solution can evolve beyond an academic prototype into a production ready system.

Management Team and Company Structure

You must identify the founding team and clearly define each member's role and responsibilities. You should explain why your team can execute the business idea, particularly in terms of technical expertise and complementary skills. You should also identify any skill gaps and discuss future hiring, training, or advisory needs.

Partnership Network

You must identify key external partners such as cloud service providers, API providers, technology vendors, or strategic collaborators. You should explain why these partnerships are required and how they support your operations, scalability, or market entry strategy.

Financial Projections

You must prepare realistic financial projections that include sources and uses of funds, clearly stated assumptions, projected income statements, projected cash flow statements, and projected balance sheets. Your financial analysis should translate your business strategy into numbers and demonstrate the financial feasibility and sustainability of your venture.

Risk Analysis

You must identify major risks associated with your project, including technical, market, operational, and financial risks. You should explain potential failure points and propose realistic mitigation strategies to manage or reduce these risks.

Milestones and Execution Plan

You must define clear short term and long-term milestones and present a realistic execution timeline. Each milestone should be linked to measurable outcomes related to development progress, market entry, user adoption, or revenue generation.

Pitch Presentation Requirement (Presentation + Viva)

You must prepare a professional pitch presentation that clearly communicates the problem, your solution, the market opportunity, the technology involved, the competitive environment, the business and revenue model, and the financial outlook. The presentation should be concise, well structured, and suitable for an investor, incubator, or academic evaluation panel.
