

Who Are You?

1. Who are you?

- I am Abu Bakar, a Computer Science student and software developer.
- I like building useful software with AI, machine learning, and web development.

2. What do you stand for?

- I stand for learning, solving real problems, and using technology in a good way.
- I believe software should save time, make work easier, and help people.

3. What value do you offer?

- I can build practical digital solutions from idea to working product.
- I can work on web apps, AI features, machine learning models, and simple user-friendly systems.

4. Who do you offer value for?

- I offer value for students, developers, universities, small businesses, and people who need smart software solutions.
- My work helps users automate tasks, understand data, and make better decisions.

5. What is your differentiator?

- My differentiator is that I combine AI knowledge with full-stack development skills.
- I do not only learn ideas; I build real projects and make them usable.

6. What do you need to learn?

- I need to learn more about building large software systems and improving real-world applications.
- I also want to improve in system design, cloud deployment, and teamwork.

7. What are your strengths?

- Fast learner
- Good problem-solving
- Consistent and hardworking
- Good at building practical projects
- Can explain technical ideas in simple words

8. What are your weaknesses?

- Sometimes I take on too many ideas at once.
- This can affect my focus.
- I am improving my time management, planning, and deeper focus on one project at a time.
